

Obesity Analysis

Guidelines for using the project:

Prerequisites

Before running the project, ensure the following libraries are installed:

Pandas, NumPy, Matplotlib, Seaborn.

1. Download the repository.
2. Open the notebook (`EDA\_ObesityPrediction.ipynb`) in Google Colab or Jupyter Notebook.
3. Ensure the dataset file (`Obesity Dataset.csv`) is present in the correct location.
4. Run the notebook cells sequentially from top to bottom.
5. Review the generated visualizations and insights.
6. Run all cells in order to avoid dependency issues.
7. Verify dataset availability before execution.
8. Use the latest version of Python (3.9 or above recommended).
